

FEATURES & SPECIFICATIONS

AVAILABLE IN KOLORSTEEL & GALVANIZED STEEL

- **Bold Profile:** ROOF DECK's high ribs impart a sense of boldness to your building in a surrounding of common low ribbed roof.
- **Greater Strength:** With its deep corrugations, the ROOF DECK is stronger and consequently solidly reinforces the entire steel structure.
- **Unique On-Site Forming:** Like the other famous SANKO profiles, the ROOF DECK can be formed for you on-site, thus giving you continuous roofing sheets without any end laps.

the ROOF DECK can be formed for you on-site, thus giving you continuous roofing sheets without any end laps.

- **Purlins Savings:** ROOF DECK'S structural advantage can be maximised by the increased purlin centres, thus reducing the number of purlins and overall building costs.
- **Lower Roof Pitch:** Now, a flatter roof is possible with ROOF DECK since the side laps of the high panel ribs will always be above the level of the rainwater flowing down the roof.
- **Reduced Fascia Cost:** A flatter roof means only a shorter fascia is needed.

MATERIAL:

As a standard, ROOF DECK is made from either high tensile or commercial quality corrosion resistant galvanized steel.

AVAILABLE FINISH:

Either in KOLORSTEEL, plain galvanized steel or other coating types.

DIMENSIONS

Length:

Because ROOF DECK is roll formed from selected quality coils, ROOF DECK sheets can be made to any length required limited only by the maximum transportable length of 25 metres.

However, with sufficient quantity, SANKO's ultra modern machines allow ROOF DECK to be roll formed on-site.

ROOF DECK on-site forming has the following advantages over other roofing:-

- (1) Continuous lengths of sheets from ridge to eave with no end laps.
- (2) No leaks at end laps.
- (3) No end laps wastage.
- (4) Factory fresh sheets with no damages due to multiple handling.

Width:

Overall – 660 mm

Effective Cover – 600 mm

Rib Height:

87 mm
